

# ZZInfoBar – Changelog

---

## Addon Structure

---

- The main addon and its plugins have been merged into a single addon folder.
- All components are now bundled under `AA_ZZInfoBar`.
- The plugin structure has been adjusted so the addon no longer requires multiple separate ZZInfoBar plugin folders inside the AddOns directory.

## Expanded Currency Display

---

`ZZBagInfo` has been expanded with additional Chronicles of Arcadia currencies:

- PNC
- Dreamland Pioneer Sigils
- Festive Ribbons
- Reward Coins
- Cosmetic Fragments
- Locked Level 7 Stones
- Mirror Shards
- Mirrorworld Tickets
- Arcadia Coins
- Atlas Scrolls
- Nero Coins
- Trial Badges
- Atlas Tokens
- Star Soulstones
- Aetheric Soulstones
- Astral Soulstones
- Elemental Soulstones
- Spirit Points
- Training Points

## Improved Currency Presentation

---

- Added matching icons for the newly supported currencies.
- Adjusted several currency icons so they fit better into the ZZInfoBar display.
- Currency values and icon assignments were aligned with the corresponding Chronicles of Arcadia currency groups.
- The newly added currencies can be enabled or disabled individually through the ZZBagInfo menu.

## Improved Durability Display

---

- The durability display has been made easier to read:
  - Current durability is shown in green.
  - Maximum durability is shown in light blue.
  - Low durability is highlighted in red.

- A chat warning is shown when an equipped item reaches low durability.
- Amulets are excluded from durability checks because their durability is not relevant for the displayed repair warning.

## ZZCharInfo Cleanup

---

The unused combat/DPS section has been removed from `ZZCharInfo`.

### **Removed entries:**

- Damage per second
- Current combat status
- Show current DPS instead of average DPS

### **Reason:**

- These options were not needed for the current `ZZInfoBar` setup.
- Removing them makes the configuration cleaner and reduces unnecessary menu entries.

## Menu and Usability Improvements

---

- The `ZZInfoBar` settings menu has been reorganized for better readability.
- Options are grouped more clearly.
- The gear button behavior has been simplified:
  - Left-click now opens the compact menu.
  - The previous large dropdown behavior was removed from the gear button.
  - The gear tooltip was removed.

### **Reason:**

- The compact menu provides faster access to the relevant `ZZInfoBar` options.
- Removing the old large gear dropdown reduces menu clutter.
- Removing the tooltip keeps the interface cleaner and avoids unnecessary overlay text.

## New BuffHandler-Style Skin

---

- Added a new black/gold skin as Skin 11.
- Skin 11 is visually based on the `BuffHandler` design.
- This allows `ZZInfoBar` and `BuffHandler` to match better when both addons are used together.
- The skin selection has been expanded from 10 to 11 skins.
- A new gear-style menu button has been added for the new skin.
- The bar texture has been added in a matching black/gold artwork style.

## Full Localization

---

The entire addon has been fully translated into every supported client language.

- All six plugins (`ZZBagInfo`, `ZZCharInfo`, `ZZMyPet`, `ZZNewMail`, `ZZSocialContacts`, `ZZTitles`) and the `ZZInfoBar` core are now completely localized.
- Every piece of user-facing text is covered: menu options, tooltips, button labels, chat messages, and currency names — not just individual strings.
- Supported languages: English, German, Polish, Spanish, French, Russian, Simplified Chinese, Traditional Chinese, Japanese, and Korean.

- Previously only English, German, and Polish were complete, with Russian only partially done. The remaining languages still showed English placeholder text in many places. These have now all been completed.
- The newly added Chronicles of Arcadia currencies (Arcadia Coins, Star Soulstones, Mirror Shards, and all the others) now display with translated names in every language. Proper names such as Arcadia, Nero, Atlas, Dreamland, Phirius, and PlayerNet are kept unchanged, while the descriptive parts are translated.
- The low-durability chat warning is now translated in every language. It was previously missing from several languages, including Polish.

#### **Bugfix:**

- The gold display option contained leftover German text ("`Gold anzeigen`") in the English version. It now shows the plain currency name, consistent with the other currencies.

#### **Reason:**

- Brings ZZInfoBar to full translation coverage in every supported language, matching the localization completeness of BuffHandler.

## **Removed / Cleaned Up**

---

- Removed separate plugin-folder dependency by merging the addon structure into one main folder.
  - Reason: easier installation and cleaner AddOns folder structure.
- Removed unused combat/DPS configuration entries from `ZZCharInfo`.
  - Reason: these options were not part of the desired final ZZInfoBar feature set.
- Removed the old large dropdown behavior from the gear button.
  - Reason: the compact menu is cleaner and more practical for normal use.
- Removed the gear button tooltip.
  - Reason: the button function is clear enough without additional tooltip text, and the interface looks cleaner.
- Removed amulets from the durability check.
  - Reason: amulet durability is not relevant for the repair warning and should not clutter the durability tooltip.

## **Overall**

---

This update focuses on a cleaner addon structure, expanded Chronicles of Arcadia currency support, improved visual consistency with BuffHandler, a clearer durability display, full localization of the entire interface into all supported languages, and a more streamlined configuration experience.
