

ZZInfoBar – Changelog

Title Quickselection (ZZTitles)

- The title quick-selection dropdown now shows an individual icon for each title instead of a single generic icon for all entries.
 - Icons are pulled from the matching Chronicles of Arcadia title source — normal titles, ancillary-title-frame titles, and quest/instance titles — with a generic title icon as fallback.
- Right-clicking the title button in the bar now clears the saved quick-selection list (manual reset).
 - The currently worn title is kept, consistent with the existing automatic cleanup.
 - Previously the list could only be trimmed one entry at a time from inside the dropdown, or was reset automatically once it grew large.
 - A right-click hint was added to the button tooltip.
- Fixed the title icon in the bar being clipped at the top edge; it now sits correctly inside the button.

Reason:

- Distinct icons make the title list much easier to scan, and the manual reset gives direct control over the saved titles instead of waiting for the automatic cleanup.
